STINE® 15EH62 BRAND

EXCLUSIVE LINE FOR 2027: 15EH62 brings superior iron deficiency chlorosis tolerance paired with consistent yield performance for soils with very high calcium carbonate that are poorly drained. It has the 1k with 3a Phytophthora root rot traits for defense against the rots and maintains its medium height even on poorly drained fields. Strong tolerance to sudden death syndrome, combined with good standability, promotes earlier planting windows to bring that much-needed yield to the rough acre 15EH62 is meant for.
